

3-2 Functions

Recall.

Function: when each domain value is paired with only one range value (no repeating x's)

· graphically: passes the vertical line test

Function notation: $f(x)$ "f of x"

means: function named f is written using x's

Interval Notation

If the interval goes on forever we can use the infinity symbol (∞)

Set Notation

Set Notation is used to represent a group of values (elements)

2 ways to use set notation:

1. {list each element in the set}

examples:

Who are the students sitting in your row?

$\{ \text{John, Jack, George} \}$

What are the shoe sizes of the students in your row?

Set Notation

2. {variable being defined | variable description}

means "such that"

Example: $\{x | x \geq 5\}$

Use this when your set is too large to list!

Examples:

How much money can a person earn in a lifetime?

$\{x | x \text{ is a real number}\}$

All numbers less than 7.

$\{x | x < 7\}$

Write each set in interval and set notation.

"All real numbers greater than or equal to 2 but less than 9." $[2, 9)$
 $\{x \mid 2 \leq x < 9\}$

"All real numbers greater than or equal to -7." $[-7, \infty)$
 $\{x \mid x \geq -7\}$

Domain & Range

Domain: The set of all inputs
 x "the set of all x-values" (when applicable)
 "independent variable"

Range: The set of all outputs
 y "the set of all y-values" (when applicable)
 "dependent variable"

State the Domain & Range in both interval and set notation:

Dom: $[0, \infty)$ $\{x \mid x \geq 0\}$ Dom: $(-\infty, \infty)$
 Ran: $[0, \infty)$ $\{y \mid y \geq 0\}$ Ran: $[0, \infty)$

Dom: $[-3, 2]$ $\{x \mid -3 \leq x \leq 2\}$ Ran: $[0, 2]$
 Ran: $[0, 2]$ $\{y \mid 0 \leq y \leq 2\}$

Dom: $[-3, 3]$

You try!

State the Domain & Range in both interval and set notation:

Dom: $[0, \infty)$ $\{x \mid x \geq 0\}$.
 Ran: $[0, \infty)$ $\{y \mid y \geq 0\}$

Dom: $[-10, 10]$
 Ran: $[0, 8]$

∪ ∩ ∪
